**Deadlines & Important Dates**

- **Last Date for Submission of Abstract**: May 01, 2009
- **Last Date of Submission of Symposium and Early Registrant-Paper Abstracts**: February 28, 2009
- **Notification of Acceptance Symposium and Early Registrant-Papers**: March 20, 2009
- **Notification of Acceptance of Final Group of Papers**: May 15, 2009

**Call for Paper Details**

**Scope and Topics**

'Human Ecology for an Urbanising World'

This Conference will examine the status of, and current challenges facing, human ecology around the world. It aims to bring together scholars and practitioners associated with the study and practice of human ecology to demonstrate the relevance of the discipline, and its philosophy and applications, for the contemporary environment and for society.

The continued growth of cities and the increasing rates of consumption of hundreds of millions of urban people are continuing to have impacts far beyond urban areas themselves. The transformation of the earth's surface, atmosphere and waters is both modifying ecosystems and changing societies. Resolution of the many problems that these transformations create requires the holistic, integrative approach to the earth as the home of humankind that human ecology fosters and promotes. This conference aims to bring together the diverse perspectives embraced by the wide range of approaches to these problems and to produce new ideas and practical suggestions for improving the efforts being made to improve people's lives and to better care for the planet.

**Among possible themes are:**
- Training and education for sustainability & social responsibility
- Sustainable food procurement
- Ethical enterprise
- Individual responsibilities and ethical dilemmas in human ecology
- Environmental, ecological and health impacts of pollution
- Sustainability assessment
- Conservation Psychology
- Ecology in Thought and Action
- Urban Human Ecology
- New Directions in Human Ecology Education
- Resilient Roads to Management: Processes and Challenges
- Environmental Biography
- Urban behaviour and public perception
- Traditional societies in a urban world
- Human ecological ethical dilemma of tourism
- Human ecology issues of port, airport and transportation node developments
- Risks and uncertainties associated with urban pollution
- Adaptation to climate change
- Pressures of recreation on wilderness and National Parks
- Water for multi-purpose needs: assessing priorities and alternatives
- The role of financial institutions in a sustainable future
- Research frontiers in human ecology
- Communicating human ecology
- Management of waste as a renewable resource

Submission/Contact Address

Ian Douglas
Chairman, Board of Governors (CHEC)
First Vice-President (SHE)
Email: ian.douglas@manchester.ac.uk

Call for Poster Details

Scope and Topics

- Same as for paper session -

Submission Guidelines

Poster presentations are also invited: a large area for the display of posters will be available. Posters provide an excellent means of communicating both findings and work in progress. Participants are invited to bring A0 size posters for mounting on boards which will be provided. In order that adequate space is available, please indicate your intention to display a poster on the reply form. A prize will be awarded for the best poster offered by a student participating in the conference.

Additional information about the event

Parallel sessions will be held based on topics suggested by participants and by the International Scientific Committee. The confirmed sessions are listed below, but suggestions for additional sessions are invited.

- Ecopolis, Eco-cities, Eco-towns and Eco-communities (SCOPE China and CHEC)
- Faith and Human Ecology (Commonwealth Human Ecology Council (CHEC))
- Landscape, Heritage and Sustainability (CHEC and GARLAND)
Sample records - Publishing Opportunities Database on EBSCOhost

- Urban food provision (CHEC)
- Global Food Flows, Urban Food Security and Ecosystem Services (ANU: Rob Dyball)
- Urban greenspace and safe, secure, cohesive communities (UK MAB Urban Forum)
- Climate change and the urban environment (CURE, University of Manchester)
- The urban metabolism approach (Institute of Social Ecology, Vienna and IHDP)
- Urban Wildlife (Megan Draheim, George Mason University)
- Exemplary practice in teaching human ecology (German Society for Human Ecology)
- Indigenous knowledge and the urban environment (UNICAMP, Brazil)
- Regional development: urban impact on natural ecosystems (University of Guadalajara)
- Impacts of migration from cities on rural areas (SHE: Linda Kruger)
- Environment and Society workshop (University of Manchester: Joe Ravetz)
- Research strategies and academic writing for human ecology Ph.Ds (Andreas Bjurström)
- Regional collaboration, sustainable business, guiding growth and college-community collaborations (College of the Atlantic: Ken Cline)
- Understanding and managing the problem of gross rebound effects: a suggestion about how to solve global environmental problems (University of Umeå: Stig-Olof Holm)
- Philosophy/Human Ecology (SHE: Bill Throop)
- Urban health and quality of life (University of Geneva: Roderick Lawrence)
- Sustainability assessment and resilient roads to resource management: processes and challenges (University of Göteborg: Karl Bruckmeier)

Workshops and Panel Discussions can be held on any topic approved by the International Steering Committee. Further suggestions for plenary sessions, workshops, discussion groups and individual papers are now invited.

Exhibition:
Exhibition space will be available for show-casing the state-of-the-art developments related to the human ecology the urban environment.

Call for Paper Details

Scope and Topics

Integrated manufacturing and service systems refer to the network of manufacturers, suppliers, retailers, distributors and other service providers who are organised to enable information flow critical to the movement of materials and/or services through the supply chain, and effective coordination of activities to address various stages of the product life cycle.

Increasingly, products are being offered as a service that must be provided over certain duration, at a pre-specified quality, price and level. Typical examples of such services include leasing of photo-copying machines, and service arrangements between airlines and engine manufacturers. Manufacturers provide such products as part of a service package, where they are responsible for maintaining the product during its contracted period.

The delivery of a service, and not just a product, requires that the supply chain behind it be designed and operated to deliver products initially, maintain them, accept returns, refurbish and deliver again the same service over and over again. The refurbished products also need to be taken out of the supply chain once they reach the end-of-life and/or are replaced by newer generations.

Design and operation of such integrated supply chains requires the development of methodologies and frameworks to support delivery of integrated products and services. Some of the interesting issues that such integrated supply chains throw up include:

- Pricing of services that are offered
- Design and operation of service networks to support these services
- Management of product and spare parts inventory, considering the product life cycles
- Design of products for refurbish ability

2009 offer to CAUL member libraries
Competitive pricing of services would help the development of such models; service networks, on the other hand, need to be designed to support both the forward and reverse flow of components and end-products. Inventory management in these integrated supply chains has its own challenges, dealing as it does not only with new products/components but also refurbished ones. Finally, product life cycles have a great impact on the operation of these integrated supply chains, as does the design for refurbish ability.

The effort towards integrated supply chains is also driven by increasing environmental concerns, as well as the economic opportunities inherent in the reuse (of components) and refurbishment of products. Going forward, such imperatives would take a more central stage in the design and operation of supply chains, creating new avenues for researchers and practitioners in the field.

Papers in this special issue will consider, but are not limited to, the following issues in integrated manufacturing and service systems:

- Modeling and design of supply networks that facilitate both forward and reverse flow of products and services
- Modeling tools to support the analysis and development of strategies in design and manufacturing for disassembly, recycling and refurbishment
- Consideration of product life-cycles in design and operation of supply chains
- Inventory management in supply chains that support both products and services
- Co-ordination mechanisms and techniques, protocols as well as tools for improving co-ordination between distributed members of supply chains
- Life cycle analysis of different value chains to minimize the use of materials and waste
- Development of appropriate performance measures for new manufacturing paradigms

These areas are just indicative and this special issue would welcome papers that contribute to both the theory and practice of "Integrated Manufacturing and Service Systems."

### Submission Guidelines

Abstracts and proposals should be max 1500 words. Submitted papers should not have been previously published nor be currently under consideration for publication elsewhere. All papers are refereed through a peer review process. A guide for authors, sample copies and other relevant information for submitting papers are available on the Author Guidelines http://www.inderscience.com/mapper.php?id=31 page. You may send one copy in the form of an MS Word file attached to an e-mail to the guest editor and with a copy to Editorial Office.

**Journal Call for Paper Details**

**Objective**

This journal applies economic, organizational and other theories to accounting and finance phenomena and publishes occasional special issues on themes such as on research methods in management accounting.

**Scope and Topics**

This established journal publishes theoretical, empirical and experimental papers which significantly contribute to the disciplines of accounting and finance. Using a wide range of research methods including statistical analysis, analytical work, case studies, field research and historical analysis, articles examine significant research questions from a broad range of perspectives.

**Additional Description**

**Indexed/Abstracted:**
- ABI - INFORM (American Business Information) (Nov.1984-)
- Accounting and Tax Index (Online Edition) (Nov.1984-)
- Accounting Articles
- Business Index
- Business Publications Index and Abstracts
- Environmental Sciences and Pollution Management
- Management Contents
- RePEc
- Risk Abstracts (Online Edition)
- SCOPUS
- Trade & Industry Index

This journal is Published on behalf of The Accounting and Finance Association of Australia and New Zealand (AFAANZ). This is essential reading for academics, graduate students and all those interested in research in accounting and finance. The journal is also widely read by practitioners in accounting, corporate finance, investments and

2009 offer to CAUL member libraries

merchant and investment banking.

**Brief Submission Details**

Manuscripts should be double-spaced, with wide margins, and printed on one side of the paper only. All pages should be numbered consecutively. Electronic submission to the Editor is strongly encouraged via email. Electronic submissions can be in Word or PDF format. Alternatively, three copies of the manuscript should be sent to the editor via mail.
